## (54) HAIR DYE APPLICATOR

## (57) Abstract:

**PROBLEM TO BE SOLVED:** To provide a hair dye applicator for discharging hair dye from the discharge port of a comb tooth by supplying a prescribed amount of hair dye to a vessel main body from each vessel, mixing the hair dye, fitting a cap with a comb to the upper surface of a top wall and pressing an operating member.

**SOLUTION:** A vessel main body A comprises a screw cylinder having a side cylindrical wall 2 forming a cylinder and a screw cylinder having threads provided in an outer peripheral wall and a bottom wall 1 connected to a piston guide tube 3. A piston member B includes a piston B1, a piston sliding tube 13 slidably inserted into the piston guide tube and an operating member connected to the piston. A cap C with a comb is provided with a cap main body C1 and a comb body C2. The cap main body is provided with a top wall 30 connected to the comb body and a side cylindrical wall 31 having threads provided in an inner periphery. The

comb body is provided upright in the top wall of the cap main body and has a comb tooth having a flow hole 40 communicating with a cylinder chamber 20 therein and a discharge port 43 in an end side part.
